

Evaluation Guidelines

In the top section of the evaluation interface, you will see sets of three color grids and an expression that should describe exactly one of them.

Your task is to decide which grid is described by the expression. To make your selection, click on the grid you think the expression refers to.

If you are unsure, you do not have to choose a grid. Instead, either select the button

- *No Object Fits* if you think the description does not apply to any of the displayed grids, or
- *Multiple Objects Fit* if you think the description applies to more than one grid.

In addition to selecting the target grid, you are also asked to assess how informative the description is. To do this, use the slider in the second section of the interface. The slider is disabled if you select *No Object Fits* in the first section, because this option indicates that the description contains false information.

Rate the amount of information using the following scale:

To identify the target grid, the description provides:

- (1) Less information than I needed
- (2) Somewhat less information than I needed
- (3) The right amount of information
- (4) Somewhat more information than I needed
- (5) More information than I needed

To submit your evaluation and continue to the next item, you must do one of the following:

- select a target grid or *Multiple Objects Fit* in the first section, and select a slider value in the second section, or
- select *No Object Fits* in the first section.

After you click the button *Confirm Selection* in the last section of the interface, you will receive feedback on your decision, and the correct target will be highlighted. The items vary in difficulty, and not all descriptions are of the same quality. It is therefore to be expected that you will occasionally make wrong decisions.

If you want to pause your annotations, you can close your browser and return to the same item later using the provided URL. Please note that you cannot go back and edit previous items.

If you have any questions, please contact Simeon or Manar via Element or email.
